

## BD3 CLEAN COAL- CIVIL ENGINEERING SERVICES

Saskatchewan Power Corporation

Regina, Saskatchewan

### Project Description

In 2009, KGS Group's Regina civil/structural personnel were retained by SaskPower to assist in the concept development and preliminary civil engineering services for the BD3 Clean Coal Carbon Capture project. The work included a review of existing building conditions relative to conceptual modifications required for the new Clean Coal installation with other members of SaskPower's team. In particular, these services included preliminary work on several of the project components specifically identified for detailed design in this RFQ. These include:

- Boilerhouse Materials Handling Structural Modifications
- Boiler & Economizer Support steel Modifications
- Main Steam Line Structural Support Modifications
- Stator Hoisting and Moving.

In 2010, KGS Group were retained to provide detailed civil engineering services for the project. It is anticipated that this work will proceed in 2011 pending a decision on the part of SaskPower to proceed with the Clean Coal project
