

HYDRAULIC STUDIES OF IMPACTS ON KAM RIVER LEVELS FROM FLOOD PROTECTION WORKS AT FWHP

Ontario Ministry of Tourism

Thunder Bay, Ontario

Project Description

KGS Group was retained by the Ontario Ministry of Tourism to complete hydrological studies to assess the hydraulic and ice regimes of the Kam River and its impact on the Flooding of the FWHP. A variety of options to protect Fort William Historical Park (FWHP) from flood damages were also evaluated in subsequent assignment. One of the leading options proposed by KGS Group during the conceptual study was the construction of a dyke around the periphery of Pointe de Meuron.
